Manager Manual

Fuel Station Management System

User Manual

Generated 2026-06-05

Who this is for: the station **Manager**. This guide walks you through your whole day in order - from logging in, through reviewing the attendants' shifts and closing off the day, to managing stock, reading reports, and administration. Each step says **what to click** and **what to expect**.

Your menu (top bar): four groups - **Day**, **Stock & Sales**, **Reports**, **Admin** - plus the **NextStop logo** (your home), a **bell** (alerts), a **light/dark** toggle, and **Logout**.

Money is shown in ZMW (K). Tip: the **date** you pick on your home screen is remembered as you move between pages, so you don't re-pick it each time.

1. Logging in

1. Open the station web address.
2. Enter your **email** and **password**.
3. Click **Sign in**.

What to expect: you land on your **home dashboard**, which includes the **Today's Flow** card - your daily checklist and starting point.

2. Your home: "Today's Flow"

This card is the hub of your day. It shows the day's chain as four steps, each with a status and a button:

- **Shift set up** - is there an active shift with attendants assigned.
- **Tank dips recorded** - opening/closing dips entered.
- **Handovers reviewed** - how many attendant handovers are still pending vs approved.
- **Day closed** - whether the day has been closed off.

What each part does:

- A coloured dot shows each step's state (done / needs attention / not done yet).
- The **button on each row** takes you straight to the page for that step (for example "Review" opens Handover Review; "Close-off" opens Daily Close-Off).
- The **date picker** sets the day you're working on; it carries to the other pages.

What to expect: at a glance you know what's done and what's next. Your normal day is: review handovers, then close off the day. Start there.

To return here anytime, click the **NextStop logo** (top-left).

3. Step 1 of your day - Review handovers (Day > Handover Review)

Purpose: check and approve each attendant's end-of-shift handover. The day **cannot be closed** until all handovers are approved.

1. Click **Day > Handover Review** (or the **Review** button on Today's Flow).

What you see:

- **Summary cards** at the top: Awaiting Closing, Pending Review, Flagged, Approved Today.
- A **filter bar**: date, shift, and status tabs (All / Awaiting Closing / Pending / Flagged / Approved).
- A **table** of handovers - each row shows attendant, shift, **Expected Cash**, **Actual Cash**, **Difference**, any **Flags**, and the **Review Status**.

Reviewing a handover:

2. **Click a row** to expand it. **What to expect**: full detail opens - nozzle readings (electronic/mechanical, deviation), fuel/LPG/lubricant/accessory sales, credit sales, and the attendant's safe deposits.
3. **Approve a clean handover**: click **Approve**. **What to expect**: it is approved immediately and the stock is applied; the row moves to "Approved".
4. **Approve a flagged handover** (cash short or meter deviation): click **Approve**. **What to expect**: a box opens that **requires a written justification**. Use a **quick-reason chip** to fill it (for example "Counted twice - confirmed") or type your own, then click **Confirm Approve**. The note is saved to the audit trail.
5. **Return a handover** (something is wrong): click **Return**. ****What to expect**: **a box opens** requiring a reason (**reason chips available**). Click **Confirm Return****. The attendant is notified to correct and resubmit.
6. **Approve several at once**: tick the checkboxes on clean handovers, then click **Approve Selected (N)**.

Shifts still being closed: the **Awaiting Closing** tab lists shifts whose readings are verified but not yet closed. Use **Complete closing** to finish one.

When everything is reviewed: a green banner "All handovers reviewed" appears with a **Next: Daily Close-Off** button - click it to move to Step 2.

4. Step 2 of your day - Close off the day (Day > Daily Close-Off)

Purpose: reconcile the day's takings against the bank deposit and **lock** the day. This is final.

1. Click **Day > Daily Close-Off** (or the **Next: Daily Close-Off** button).

What you see:

- The **date** and a **status badge** (Open / Pending Reviews / Closed).
 - **Approved Shifts** - a table of the day's approved handovers.
 - **Daily P&L Snapshot** - fuel/LPG/lubricant/accessory revenue, expected vs actual cash, net variance.
2. **If any handover is still unapproved**: you will see a warning with a link back to **Handover Review**. **What to expect**: the close button stays disabled until everything is approved.
 3. **Enter the bank deposit**:
 - **Deposit amount (K)** - required.
 - **Deposit reference** - optional (for example the bank slip number).

- **Owner notes** - optional.

What to expect: as you type the amount, a live "Deposit vs Actual Cash" line shows whether you are over, short, or exact.

4. Click **Close Day & Lock Handovers**. **What to expect:** a confirmation box appears stating this **locks the day and cannot be undone**. Confirm to close.

After closing: the day shows **Closed** with who closed it and the deposit variance. **Close-Off History** (expandable at the bottom) lets you view or jump to past days.

5. Managing stock (Stock & Sales)

Open the **Stock & Sales** menu. It contains:

Stores / Stock

1. Click **Stock & Sales > Stores / Stock**.

What you see: summary cards (item count, items needing re-order, stores and forecourt units), a re-order alert if any item is low, and a table of items with their **Stores** and **Forecourt** quantities and re-order level.

2. To move stock, click **Manage stock** on an item. **What to expect:** one window opens with an **action selector** at the top - **Receive, Issue, Damage, Adjust:**

- **Receive** - add stock into Stores (enter quantity).
- **Issue** - move stock to the Forecourt (enter quantity).
- **Damage** - write off damaged stock (pick the bin, quantity, and a

required reason - reason chips available).

- **Adjust** - set the counted quantity after a physical count (pick bin, enter the new quantity, and a **required reason**). Switching the action resets the quantity/reason. Click **Confirm** to save.

3. **Add or edit an item:** click **+ Add / Edit Item** (top right).

4. **See history:** click **Show recent movements** for the stock ledger.

Stock Takes

1. Click **Stock & Sales > Stock Takes**.

What to expect: start a count, enter the counted quantities for each item, and **Submit**. Submitting applies the count; the **owner approves** it.

Tank Levels / Sales / Credit Accounts

- **Tank Levels** - current fuel volumes per tank (view).
- **Sales** - sales figures and trends (view).
- **Credit Accounts** - manage credit customers and their limits.

6. Reviewing reports (Reports)

Open the **Reports** menu. These are read-only views (most can be exported):

- **Three-Way Reconciliation** - physical vs meter vs accounting comparison.

- **Tank Analysis** - tank movement and possible loss/variance.
- **Shift Reconciliation** - per-shift reconciliation detail.
- **Sales Reports** - sales summaries and trends.
- **Tank Readings & Monitor** - historical tank readings and validation.
- **Advanced Reports** - staff/nozzle/island/product and custom reports.
- **Anomaly Alerts** - flagged discrepancies needing attention.
- **Notifications** - system notifications (low stock, overdue deposits, etc.).

What to expect: pick a date range or filter where offered, then view or export. None of these change data.

7. Administration (Admin)

Open the **Admin** menu.

Settings

1. Click **Admin > Settings**.

What you can do:

- **Fuel prices** - change a price (takes effect immediately) or **schedule** a change for a future date/time.
- **Tax / levy rates**.
- **Validation thresholds** - for example cash-shortage tolerance, meter-deviation percentage.
- **Reconciliation tolerances**.

What to expect: changes are saved and recorded in the Audit Log; price changes apply to new sales from their effective time.

Users

1. Click **Admin > Users**.

What to expect: create, edit, or deactivate user accounts and set their role (attendant, supervisor, manager).

Audit Log

1. Click **Admin > Audit Log**.

What to expect: a searchable record of every change - price updates, approvals, returns, settings, user changes - filterable by action, type, user, and date.

8. Logging out

Click **Logout** (top-right). You return to the login screen.

Quick reference - the manager's day

1. **Log in** and land on **Today's Flow**.

2. **Day > Handover Review** - approve the clean ones, justify or return the rest, then click **Next: Daily Close-Off**.

3. **Day > Daily Close-Off** - enter the **bank deposit**, then **Close Day & Lock**.

4. As needed: **Stock & Sales** (receive/issue/damage/adjust, stock takes), **Reports** (reconciliation, sales, anomalies), **Admin** (settings, users, audit).

Rules to remember

- You **cannot close the day** until **all handovers are approved**.
- **Flagged approvals** and **returns** require a **written note** (kept in the audit trail).
- **Closing the day is final** - it locks all handovers for that date.
- A **stock take** is submitted by you and **approved by the owner**.
