

Operator (Attendant) Manual

Fuel Station Management System

Generated 2026-06-05

Who this is for: the forecourt **operator/attendant** (system role: user). **What you do in the system:** two things - **Start your shift** (take over and verify what you're inheriting) and **End your shift** (record your closing figures and hand everything to the Supervisor/Manager). You also record **safe deposits** during the shift.

Your whole app is one menu: **Today's Shift**, with **Start Shift** and **End Shift**. You don't need anything else.

Throughout: "tap" and "click" mean the same thing. Numbers like meter readings use the pump's units; money is in ZMW (K).

1. Logging in

1. Open the station web address in your browser.
2. You'll see the **login screen**. Enter your **email** and **password**.
3. Tap **Sign in**.

What to expect: you go straight to your shift screen (**Today's Shift**). Operators do not see a dashboard - your work screen opens directly.

If your email/password is wrong, you'll see an error message and stay on the login screen.

2. The menu (top bar)

After login the top bar shows:

- **Today's Shift** (a menu) - tap it to see **Start Shift** and **End Shift**.
- **Bell icon** - alerts (e.g. a reminder if a safe deposit is overdue).
- **Dark/light toggle** - changes the screen theme. Optional.
- **Logout** - signs you out.

That's everything. There are no other pages for an operator.

3. Start Shift (do this at the START of your shift)

Purpose: check the readings and stock you are taking over from the previous operator, and formally start your shift. **You cannot end a shift until you have started it.**

1. Tap **Today's Shift** → **Start Shift** (or, on a fresh shift, you land here automatically after login).

What to expect - the "Start of shift - verify your opening" screen:

- A blue banner explaining that these figures carry over from the previous shift's close.

- **Opening meter readings** - a table of your nozzles with the **electronic** and **mechanical** opening readings already filled in. (These are the previous operator's closing readings.)
- **Opening stock** - the cylinders, accessories and lubricants you're taking over, with their quantities.

- A **Discrepancy note** box (optional).

2. **Physically check** the figures against the real pumps and the real stock:

- Walk to each pump and confirm the meter matches the "electronic opening".
- Count the cylinders/stock you're taking over.

3. **If everything matches:** leave the note empty.

If something does NOT match (e.g. a pump reads 12,350 but the screen says 12,345, or a cylinder is missing): type what's wrong in the **Discrepancy note** box. This protects you - you won't be blamed later for a shortage that was already there.

4. Tap **Confirm opening & begin shift**.

What to expect after confirming:

- A brief "Confirming..." and then the screen changes to the ****End Shift / closing**** view.
- Your shift is now **Started** - your supervisor can see you've begun.
- You can now record and submit your closing later. (Before this, ending is blocked - see the box below.)

Note: "Confirm" is an acknowledgement, not an edit. You confirm the inherited figures or flag a mismatch; you don't change the opening numbers yourself. Corrections are handled by your supervisor.

Gate: if you try **End Shift** before doing this, you'll see **"Start your shift first"** with a **Go to Start Shift** button. Tap it, complete the steps above, and then you can end the shift.

4. During the shift - recording Safe Deposits

Whenever you drop cash into the safe, record it. The deposit section is on your shift screen.

1. Enter the **Time** (it pre-fills with the current time - adjust if needed).
2. Enter the **Amount** (K).
3. Optionally add a short **Note** (e.g. "fleet fill-up").
4. Tap **Deposit**.

What to expect:

- The deposit appears in the list below, and the running **total** updates.
- If you haven't deposited in over an hour, an **overdue** warning appears (and the bell flags it) - deposit the accumulated cash into the safe.

You can add as many deposits as you make through the shift.

5. End Shift - Step 1: Enter readings & stock

Purpose: record your closing readings and stock at the end of the shift.

1. Tap **Today's Shift** → **End Shift**.

What to expect: the "**Step 1: Enter readings**" screen, with a checklist at the top titled "**Still needed before you can submit**" that lists exactly what's left (it shrinks as you complete each item).

5a. Nozzle (pump) readings

- The **opening** reading for each nozzle is already filled in.
- For each nozzle, record the **closing** reading using **double-entry** (you type it twice to prevent mistakes):

1. Tap **Enter** on the nozzle's **Electronic closing**.
2. A box opens - "**Entry 1 of 2**". Type the closing reading, tap **Next**.
3. "**Entry 2 of 2**" - type the **same** reading again (the first is hidden),

tap **Confirm**.

4. **If they match:** a tick/checkmark appears and the reading is saved.

If they don't match: you'll be told and asked to enter it again.

- Repeat for the **Mechanical closing** the same way.
- **If a meter deviation is flagged** (electronic vs mechanical differs too much, or there's a fuel loss): a note box appears in red. **Type an explanation** - it's required before you can submit (e.g. "meter drift", "spillage").

5b. LPG cylinders (tap the section to expand)

For each cylinder size:

- Enter **Sold (refill)** and **Sold (new cylinder)**, **Damaged**, and the **closing count** on hand.
- If your closing count doesn't match what's expected, a **variance note** box appears - explain it (required).
- **Trades** (upgrade/downgrade): tap **Add trade**, pick from-size, to-size and quantity.
- If you sold none all shift: tap **Confirm No Sales This Shift** to fill the section in one tap.

5c. Accessories and Lubricants (tap each section to expand)

- Same pattern: enter **Sold**, **Damaged**, **closing count**; add a **variance note** if it doesn't reconcile; or tap **Confirm No Sales**.
- Lubricants has a **search box** - type a product name to find it quickly.

5d. Credit sales (only if your station uses them)

- Add a line per credit customer: account, fuel, volume - the amount calculates.

5e. Finishing Step 1

- Watch the "**Still needed**" checklist empty out. When nothing is outstanding, the button at the bottom becomes active: tap **Review my entries**.

- If the button is greyed out, it tells you what's still missing (e.g. "Explain all deviations to continue").
-

6. End Shift - Step 2: Review & submit

1. After **Review my entries**, you see "**Step 2: Review & submit**" - a **read-only** summary of everything you entered (readings, volumes, stock).
2. Check it. If something's wrong, tap **Back to edit** to return to Step 1.
3. Tap **Submit Readings**.
4. A **confirmation box** appears (it warns you if anything is flagged). Tap **Submit Readings** again to confirm.

What to expect:

- A green "**Readings Verified**" message. Your readings and stock are now sent to the **Supervisor/Manager** for review.
 - Two buttons appear: **Next: Close Shift** and **Redo Readings**.
-

7. Close Shift - cash reconciliation (the office step)

1. Tap **Next: Close Shift**.

What to expect: a summary of the **expected** amounts (from your readings) and your **safe-deposit total**, plus fields to enter:

- **Actual cash (safe + hand)** - required.
- **POS receipts total** - optional.
- **Credit sales** - optional line items.
- **Notes** - optional.

2. As you type the actual cash, the screen shows **Total accounted vs Expected** and whether you're **over** or **short**.

3. Tap **Submit Shift Closing**.

What to expect: a closing summary with the amounts and any flags. Your shift is now fully handed over for the supervisor to process.

8. If your handover is sent back ("Returned")

If a supervisor returns your handover for a correction:

- On your shift screen you'll see a "**Handover returned by supervisor**" banner with **their note** explaining what to fix.
 - Tap **Redo Readings**, correct the issue, and submit again (Steps 5-7).
-

9. Logging out

Tap **Logout** in the top bar. You'll return to the login screen.

Quick reference - the operator's day

1. **Log in** → land on your shift.
2. **Start Shift** → check opening readings + stock → ****Confirm opening & begin shift****.
3. **Sell** through the shift; **record safe deposits** as you bank cash.
4. **End Shift** → **Step 1**: enter closing readings (double-entry) + stock; clear the checklist → **Review my entries**.
5. **Step 2**: review → **Submit Readings** (goes to the supervisor).
6. **Next: Close Shift** → enter cash → **Submit Shift Closing**.
7. If **returned**, fix and resubmit.

Rules to remember

- You must **Start** a shift before you can **End** it.
- Closing readings are typed **twice** (double-entry).
- Wherever a count or meter **doesn't match**, you must **add a note**.
- Everything you submit goes to your **Supervisor/Manager** to process.
